Installing the Update DVD

To remove old DVD:

1. To avoid carbon monoxide poisoning, start the vehicle outside in a well ventilated area.
2. Push the OPEN button on the navigation unit to slide the front panel down to access the DVD slot cover.
3. Open the cover by pushing down on the open latch.
4. Push the MAP eject button. The DVD will automatically eject halfway out of the unit.
5. Pull the DVD straight out.

To install new DVD:

1. Make sure the label is facing up. Slide the DVD into the slot. The DVD is automatically pulled into the control unit.
2. After the DVD is loaded, close the control unit door.
3. Push the CLOSE, or OPEN button to return the front panel to its original position.
4. It will take about a minute for the navigation system to update. The update progress is displayed on the navigation screen.
5. The system will automatically restart after the update process is completed.
6. Before calculating a route with the new software, the vehicle must be driven on a verified road. As soon as the current road name appears on the bottom of the screen, the system is ready for use.
